

Pixel Blading is a revolutionary NEW tattooing technique.

The blades are made up of several very sharp pins in 1, 2 or 3 lengths that allow the artist to tap pigment into the skin achieving a pixelated appearance instead of slicing the clients skin, like microblading.

Am I a good candidate for Pixel Blading?

Pixel Blading is suitable for all skin types including oily, large pores and mature skin unlike microblading.

There are certain contraindications that may require your doctors approval and/or directive such as :

- Taking any blood thinners or on an aspirin regimen
- We recommend waiting 4 -6 weeks (before or after eyebrow service) when getting chemical peel, injections, facials and laser services

Factors that make you ineligible for Cosmetic Tattoo :

- If you are insulin dependent diabetic
- If you have cancer or have been treated for cancer in past 6 months
- If you're pregnant or nursing

What is

Pixel Blading?

Semi-Permanent Makeup

The Brow Buddha LLC

1176 1/2 S Lapeer Rd Suite E

Lapeer, MI 48446

Does it hurt?

We apply a highly effective numbing agent throughout the process, any pain or discomfort you feel will be minimal.

Every individual has a unique pain threshold, the amount of discomfort you experience will depend on your pain tolerance. However most of our clients fall asleep during treatment.

How permanent is Pixel Blading?

The results for Cosmetic Tattoo may vary from person to person. While it is a semi-permanent cosmetic procedure, the pigments used are designed to fade over time unlike a traditional body tattoo. This is beneficial in maintaining a nice, soft, natural look. The brows will last anywhere from 1-3 years before needing a color boost.

There are certain factors though that may determine the longevity of the results. This includes your skin type, metabolism, overall lifestyle and certain health conditions as well as client commitment to our aftercare protocol.

The long-term healed results ...

We cannot express enough how beautiful the long-term healed results are using this technique. We have learned over the years that Microblading (slicing the skin) is extremely invasive causing scar tissue, pigment blurring and often placed too deep leaving brows with a blue or red cast; causing irreversible or costly damage. Pixel Blading however, can be performed over and over throughout the years giving beautiful results time and time again.

Benefits of Pixel Blading

- Create a professional shape specific to your bone structure using the golden ratio technique
- Achieve a fluffy and full brow look
- Natural and realistic looking enhancement
- Fix symmetry issues
- Camouflage scars
- Frames the face
- Gives a more youthful appearance
- No more brow pencil necessary
- Wake up with eyebrows
- Swim, exercise, sauna, etc; without worrying about your brows running or being wiped away

Healing: what to expect

THE FULL HEALING PROCESS TAKES 6-8 WEEKS

At the appointment the client will receive an aftercare kit including ointment and detailed instructions on how to properly care for the brows.

Determining the perfect shape and color

We start by mapping the brows using the golden ratio method. Calipers and pre inked string are used targeting specific points of the face thus creating the brow shape that is specific to each individual.

We carry several high quality pigment lines, that tend to be warmer or cooler in undertone. Together we will select the perfect pigment that will compliment your skin and hair color. Brows can fade up to 30% as they heal.

This is why we ask you to TRUST THE PROCESS!
